

Proven Solutions. Quality Provider.

Data integrity is vital to the success of your research and scientific goals. Be confident you are getting the highest quality data available for genetics analysis; turn to an Illumina® CPro® Provider. Backed by a rigorous certification process and ongoing training, CPro Providers deliver the highest standard of service and accurate results. Get the experience, expertise, and state-of-the-art technology to take your research to the next level.

A POWERFUL PROGRAM

Each CPro Provider works closely with Illumina scientists through a comprehensive, three-step certification process. Ongoing training and annual audits, based on Illumina's Best Practice Guidelines, ensure their scientific methods and data quality are always optimized to the most current standard.

QUALITY SYSTEMS

You can trust CPro expertise to deliver optimum performance with Illumina's industry-leading genetic analysis platforms.

LEADING-EDGE RESOURCES

From idea conception to post project delivery, CPro Providers are there to help you make well-informed judgments and position your projects for success.

APPLICATION EXPERTISE

- Sequencing on the Genome Analyzer

GATC Biotech is Europe's leading service provider of DNA sequencing and bioinformatics for industry and academic research. For nearly two decades we have been continuously developing new and comprehensive solutions for DNA sequencing and bioinformatics sequence analysis – for individual DNA samples through to complete genome projects. With a total of eleven sequencing instruments GATC has the largest commercially available sequencing capacity in Europe with two terabases per year. With over 100 employees the company serves over 10,000 customers in 40 countries around the globe and has subsidiary companies in Great Britain, France and Sweden.

One of our key business goals is serving customers working in the field of clinical research or diagnostics, where targeted resequencing using the new enrichment technology provides high-quality sequence data in specifically defined areas of a genome. GATC offers its customers enrichment of a specific subset of genomic regions with the SureSelect systems from Agilent followed by deep sequencing on the Genome Analyzer Ix. The bioinformatic analysis includes, for example, mapping, SNP and InDel tables.
