Risk group classification of genetically modified organism

Donor organism (Donor is the organism from which the nucleic acid fragment originally has been derived from (e.g. *Homo sapiens*))

Description: _____

Risk group of donor organism: 1 2 3 4

Receptor organism (e.g. *E.coli* DH10B)

Description: _____

Risk group of receptor organism: 1 2 3 4

Vector (If no standard cloning vector has been used, please provide vector map if available)

Description: _____

Known information of cloned DNA (Functional characterisation of the cloned nucleic acid or gene /gene fragment (e.g. promoter region of human insulin gene))

Description: _____

Purity of nucleic acid: shotgun specifically enriched
 cloned characterised

Risk group of GMO: 1 2 3 4

Signature principal investigator _____

Signature customer _____
